

Cumulative Landscape and Visual Assessment

The approach in the Cumulative Landscape and Visual Impact Assessment (CLVIA) will be to define a 60km Cumulative Search Area and a 35km Cumulative Study Area. Within the Search Area, baseline developments (operational, under construction, consented) and proposed windfarms (those for which there is a valid planning application) and scoping windfarm developments have been identified and mapped. Within the 35km Cumulative Study Area, the assessment will focus on operational, under construction, consented and proposed (those for which there is a valid planning application) windfarms. Prior to finalising the Environmental Statement, we will liaise with South Ayrshire Council to agree the final list of projects to be considered in the Cumulative Landscape and Visual Impact Assessment.
